README.md

The Installer for the GNUBLIN Embedded Linux Board consists of two independend programs, the graphical and the commandline installer.

Both programs need root to operate. They can be started with

- gnublin-installer for the graphical installer and
- gnublin-cmdline for the commandline installer

To generate the binaries from source, you just have to execute make in the source directory. The dependencies are libparted0debian1, libcurl3, libwxgtk2.8-0 and libarchive12 (all, of course, as developer version).

Graphical Installer	Commandline Installer
